Problem statement: Many people are frustrated about going to a restaurant or fast food place and the line or wait time is very long. They feel like they spent time going to the restaurant/ fast food place, then they find out they have to wait even longer because of lines and wait times. Our solution should provide people an advantage of looking at restaurant wait times or see how crowded it is before they spend the time driving to these resturants.

Who is experiencing the problem?

Individuals and groups of people who have decided to eat out instead of cooking. This also includes ones who have a special occasion and others who just want to grab a bite.

What is the Problem?

The problem is the long wait times. No one wants to travel to a restaurant or fast food place and have to wait 30 minutes to order . People want to get in and enjoy their time or get in and get out.

Where does the problem present itself?

The problem presents itself in the crowding and peak times of the restaurants and fast food places.

Why does it matter?

It matters because it gives customers options and information about how long they would have to wait before placing their order and/or getting their food.
